

Session 3 - Build a professional, real-world web application based on your own unique idea.

DevOps Internship – Session 3 Assignment

Submission Deadline

Tuesday, 4 August 2026 (11:59 PM PKT)

What We Covered in Session 3

During this session, you learned how to build and deploy a complete production-ready web application from scratch.

Topics covered:

- Web development using Cursor AI
- Creating modern UI/UX designs with ChatGPT
- Publishing projects to GitHub
- Database integration using Supabase
- File upload and storage using Supabase Storage
- Deploying applications on AWS EC2
- Running applications with PM2
- Configuring Nginx as a reverse proxy
- Securing applications with Let's Encrypt (Certbot SSL)
- Connecting a custom domain/subdomain through DNS

Assignment

Your task is to build a professional, real-world web application based on your own unique idea.

Choose an idea that solves a real problem or provides value to users. Your originality and implementation quality will be an important part of the evaluation.

Examples include (but are not limited to):

- AI Productivity Tool
- Personal Finance Tracker
- Online Booking System

- School/College Portal
- Inventory Management System
- Restaurant Ordering System
- Healthcare Appointment Platform
- Event Management Platform
- Portfolio Builder
- AI-powered Utility Tool

You are encouraged to think beyond these examples and come up with your own innovative idea.

Technical Requirements

Your project must include:

- Responsive and professional UI
- Built using Cursor AI
- Source code hosted on GitHub
- Supabase database integration
- File upload functionality (where applicable)
- Deployment on AWS EC2
- PM2 configuration
- Nginx configuration
- Free SSL using Certbot
- Working custom domain or subdomain

Evaluation Criteria

Projects will be evaluated based on:

- Originality of the idea
- Real-world usefulness
- UI/UX quality
- Code quality and project structure
- Proper GitHub repository
- Successful deployment
- HTTPS-enabled live website
- Overall functionality and presentation

LinkedIn Showcase (Mandatory)

Once your project is completed:

1. Record a 2–5 minute screen recording demonstrating your project.
2. Explain:
 - Your project idea
 - Why you chose it
 - How you built it using Cursor AI
 - GitHub repository
 - Supabase integration
 - AWS EC2 deployment
 - PM2, Nginx, and SSL configuration
3. Publish the video on your LinkedIn profile.
4. Tag Dafi Labs and mention your DevOps Internship experience.
5. Share your LinkedIn post link with the team for review.

Creating a public project showcase helps build your professional portfolio, demonstrates your practical skills, and serves as valuable social proof for future employers and clients.

Submission Checklist

Submit the following before the deadline:

- Full Name
- Project Title
- Short Project Description
- Live Website URL
- GitHub Repository URL
- Domain Name
- LinkedIn Post URL
- Screen Recording / Demo Video Link

Deadline

Tuesday, 4 August 2026 — 11:59 PM (Pakistan Time)

Late submissions may not be considered for evaluation.

We are excited to see your creativity, technical skills, and deployment experience. Build something that you would be proud to showcase in your professional portfolio.

Best of luck! 🚀
